

## HSINSOU FA-750 Defoaming agent

HSINSOU FA-750 is a silicone defoaming agent with excellent emulsifying and dispersing stability. It is very effective for defoaming and preventing the formation of foam.

### General properties:

Appearance	:	White emulsion liquid
Composition	:	Silicone compound
Ionic nature	:	Nonionic
pH (1% solution)	:	8.0 +/- 1.0
Solubility	:	Easy to dissolve in cold water

### Special features:

1. Excellent emulsifying and dispersing stability.
2. More effective than mineral oil type.
3. Stable in acid, alkali and hard water baths.
4. Effective in atmospheric temperatures and high temperatures dyeings.
5. Good resistant to spotting.

### Application:

The amount of HSINSOU FA-750 required depends on many factors such as nature of treatment bath, type of machine

used and temperature etc.

generally 0.3 ~ 0.7 grams/liter would be adequate.

Note for handle :

a :dilute FA-750 with cold water before putting into machines.

b : do not apply FA-750 into machine when temp. is high in scouring or dyeing process.

Note: full evaluation is recommended prior to commercial usage.
